

⇒ So far first-of-a-kind commercial demonstration projects have been executed under calls, reuniting consortia for undertakings limited to one of a kind. Our proposed combination of different, existing financing instruments in a context of multiple closed regional supply chain consortia, engaging in a long term business case execution above and beyond singular demonstration (s. LCE 18), the EU's co-financing would reach beyond its widespread consumption as fixed R&D cost offset, enabling mostly large companies to entertain a certain threshold of human resources in their R&D. Unfortunately such interest holders are also the preferred clientele of National R&D subsidies providers. This may fulfill an essential function as enabler for qualitative growth in general and should be covered by specific programs therefore. Thematic focused programs, as e.g. the deployment of Competitive Low-Carbon sustainable Energy enabling Technology innovations needs to be driven by individuals with time horizon mind sets beyond large corporations' common term of executive contracts of 5 years in maximum versus innovation implementation timing requirements of 7-10 years (s. B.2.6).
